
T//WORLD TR21

New Release Fairway Wood, Utility, TR21 X Iron

For “Competitive Golfers HDCP 0~15” and Golfers who long for “Tour Model”

Full TR series line-up covers all swingtypes.

HONMA GOLF CO.,LTD. (Head office: Tokyo Minato-ku / CEO Yasuki Ito) is releasing T//WORLD TR21 Fairway Woods, and a Utility (hereinafter called “TR21 FW/UT”) from 18th September 2020, and T//WORLD TR21 X Irons (hereinafter called “TR21 Iron”) from 9th October 2020.

The TR20 series was launched earlier in 2020 promoting “SPEED” and “Trajectory control”, and this TR21 FW/UT has 4 additional concepts:

1. NON-ROTATING SHAFT SYSTEM

Honma’s distinct Non-Rotating Shaft System has already been widely used in drivers, and is now being introduced to all TR21 Fairway Woods and the Utility.

2. Adjustable sole weight

Adjustable weights in the sole make it possible to control trajectory, with specific tungsten weights best positioned for each number.

3. Titanium Head Fairway Wood (3wti)

For extra distance with a Fairway Wood, there are two 3W’s, one of which has a titanium head.

4. Multiple options to maximize the flexibility of club setup.

Introducing a new number 4 Wood (16.5°) and developing the 3wti/3w/4w/5w/7w FW’s will enable more golfers to meet their club set-up requirements and optimize their course management.

TR21 X Iron is a hollow iron beautifully shaped to maximize distance with control. Tungsten weighting and a high repulsion face are all designed to deliver for forgiveness and exceptional distance. This is a new era model which delivers a high-level performance for competitive golfers and those who aspire to play a tour model, but also for amateur golfers looking for extra distance.
